

Chloride Policy

April 10, 2025-Adopted

November 17, 2025-Amended

-The Township supports the use of chloride treatments to maintain roadway integrity and control dust. Due to the cost, it is not feasible to apply this product on a large scale. To assist residents with dust control and help with road integrity -

- The Township will set the level of subsidy each year at our March board meeting. This decision will be based on budget considerations. The subsidy will be set in the form of a percentage. Applications over 500 feet will need to be approved on a case-by-case basis each year.
- All approved chloride applications will receive the discount reflecting the subsidy.
- Chloride costs will be calculated using the price per gallon billed to the Township and then recalculated by the volume applied per foot, or gallons per foot, (price per gallon -x- gallons per foot -x- number of feet applied). The typical width of the application is twelve feet. Each resident electing to receive chloride will be billed using this formula. An administration fee of 5% will be added to each bill on all invoices under five hundred dollars.
- Areas identified as essential for chloride applications will automatically be subsidized in the amount of 25% and shared with each resident that borders the application. There are exceptions when the application is on a Township roadway that is not on a front footage of a property. In these cases, the township will pay 100% of the application. These areas will be added and removed at the Township's discretion. The Township reserves the right to adjust or limit the concentration of chloride in all applications.
- Residents can request chloride by emailing the Township at milltown@gctel.com
- Residents who "opt in" to receive chloride applications will continue to receive an application each year until canceled. Cancellations will only be accepted by emailing the Township at milltown@gctel.com , or calling Marilyn Bitzan (clerk).
